

This is how it works

Your refuse collection

Refuse collection close to your home - an important effort to improve our living environment

Huge is improving and simplifying refuse collection for our tenants

Huge has taken on board the feedback from an earlier tenant survey and now announces determined efforts to make refuse collection both clearer and simpler.

According to the survey, many tenants wanted to have a better and more pleasant environment as well as simpler and more efficient refuse collection. We are now successively introducing improvements in our refuse rooms to facilitate easier waste management for our tenants in cooperation with SRV återvinning AB.

In your apartment refuse room you can sort and recycle material you were previously forced to take to a recycling centre. In addition, there is much improved labelling in the refuse room. Clearly labelled pictures show you exactly what should be placed and where. At the same time we are working hard to renovate these rooms so that they are both cleaner and safer. In order to achieve the best possible results, we have agreed with SRV återvinning that they will organise collection, cleaning and graffiti removal in the refuse room. They will also help to clean containers as well as the area around the room.

In order for all of us to work together to improve refuse collection, we must work hard to ensure an orderly and clean environment prevails. Huge is investing much time and effort in this and we ask for your help in maintaining a clean orderly environment in the refuse room. Consider that an effective system for sorting waste means that we can recycle more. Recycling is an important environmental issue, of importance to all of us.

Together we can make a difference and improve our shared living environment.

What will you gain from these efforts?

- Simpler and more efficient refuse collection
- Easy refuse sorting
- Easy access to a refuse room for recycling, you no longer need to walk or drive to a recycling centre.
- An orderly, clean, pleasant and fresh environment

Nine types of waste

In the refuse room you should leave:

- 1. Burnable waste** – for example food scraps, nappies, books, flowers, plastic bags, plastic toys, envelopes, soft plastic and cat litters
- 2. Paper packaging** – such as paper bags, juice, rice and washing powder packaging, milk cartons, egg cartons, small pieces of corrugated cardboard
- 3. Non-burnable waste** – such as aluminium foil, ceramics, glass ornaments and small mirrors
- 4. Hard plastic packaging** – bottles, boxes, tubes, cans, can tops, small drums
- 5. Coloured glass** – coloured glass bottles, jam jars, perfume and skin care bottles
- 6. Clear glass** – clear glass bottles, jam jars, skin care and perfume bottles
- 7. Electronic waste** – TV, radio, computers, clocks, hand tools, cookers, dishwashers and washing machines, fluorescent lights, normal- and low energy bulbs, toys with built-in batteries. Not fridges or freezers. Small batteries should be left in the recycling centre battery tub.
Car batteries should be returned to the retailer or a specialist garage.
- 8. Large items** – furniture, prams, mattresses, bikes, large boxes
- 9. Newspapers and paper** – newspapers and other magazines, telephone books, junk mail, office paper and soft backed books

PLEASE NOTE!

Those of you who live in an area with a chute, Vårby Gård and Flemingsberg, should only use the chute for burnable waste.

All packaging must be cleaned before being thrown away. If packaging is not cleaned then it will soon smell in the refuse room. We may even have a problem with rats or other unwanted guests.

You should not leave the following in the refuse room:

- **Environmentally damaging waste;** waste that can damage the environment or people. This can be for example poisonous, carcinogenic, explosive or highly flammable waste. Batteries, car tyres, nail varnish, hair spray, glue, solvents, waste oil, pesticides, varnish, enamel paints, mercury thermometers, cleaning products, old medications, spray bottles (with dangerous gases or substances), developer fluid, acid, limestone remover, ammonium and lye

Dangerous substances should be left by the environment station. The environment station is a green plastic box located at SRV's recycling centres. Leave the dangerous substances in their original packaging or alternatively in another form of suitable packaging and mark their contents. Old medicines should be taken back to your pharmacy (Apoteket).
